

Managing Email Domain Restrictions for MultiLine Invitations

Last Modified on 11/18/2021 1:48 pm EST

Administrators can restrict the email domains that can receive MultiLine invitations, to prevent other administrators from inviting users from those domains.

Overview

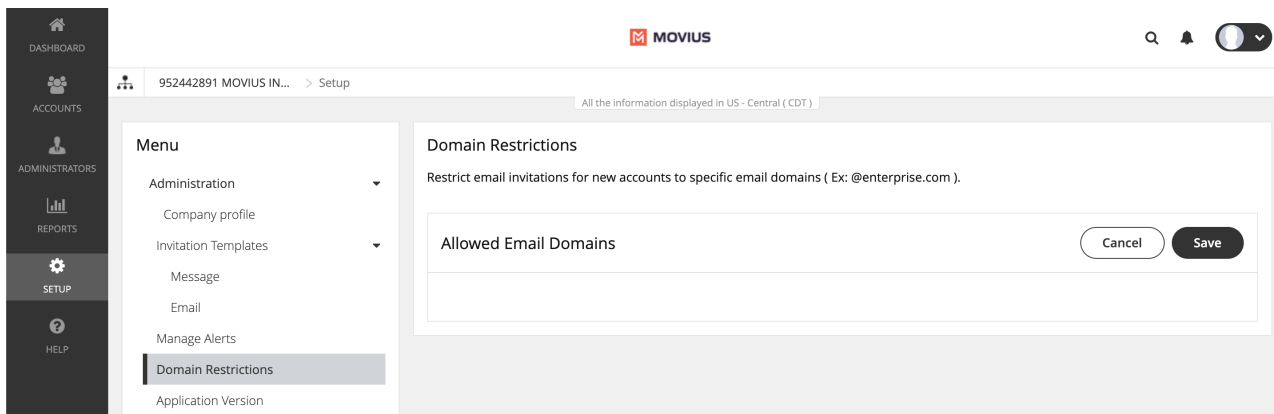

The most common use case of restricting email domains is to enforce that invitations are sent to corporate email accounts to prevent invitations from accidentally being sent outside the organization.

Before you Start

- An admin must have "Setup" Role in the organization to do these instructions. See [What Admin Roles are in the Management Portal](#).
- Navigate to the top-most organization that you want to receive the changes. See [Navigating Organizations](#).

How to add Allowed Email Domains

You can set up a list of allowed email domains under Administration in the Setup tab. This restricts which domains can receive invitations.

Note: If there are no entries under Allowed Email Domains, emails can be sent to any email domain.

1. Go to Setup > Domain Restrictions.
2. If you haven't set up any allowed domains yet, click **add** from the message.

3. Start typing in the **Allowed Email Domains** area, starting with '@' and following with your desired domain and click enter.

4. Click **Save** and then **Yes** to confirm.

Step 2: Editing and deleting

Add more or delete Email Domains by clicking **Edit**.

To delete, click the x next to an existing domain.

You're done!

Administrators will now only be able to send email invitations to the Allowed Domains.
