

# Why do I sometimes see "You're using this app outside the Workspace" when I place a call?

Last Modified on 11/02/2021 10:08 am EDT

When you place a minutes call using MultiLine for Intune, the application routes the call through the dialer of your personal phone. When this happens you may also see a relationship number dialed instead, but rest assured that your call is being placed correctly and still managed by the compliance policies required by your organization.
