

# Set the default country calling code

Last Modified on 11/14/2023 3:56 pm EST

Read on to learn how to set the default country calling code.

## Overview

A country calling code, or country dial-in code, is a prefix dialed before the telephone number when placing an international call. For example +39 is the calling code for Italy. By default, the prefix will reflect the country code of your MultiLine number.

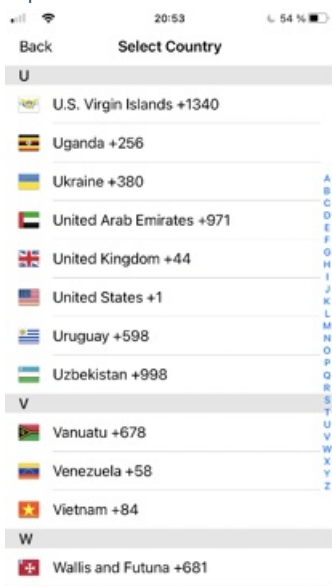

## Set the default country code

### Mobile

1. Open the dialer.
2. Tap the current country code (example below: +39).

3. Tap from the list to select the desired country calling code.

## Desktop

Desktop does not assume any given country code. You should always include the country code when adding contacts, dialing numbers, or entering numbers to text.
