

# Announcing MultiLine Indicator [Sept 2024]

Last Modified on 09/25/2024 12:22 pm EDT

## MultiLine Indicator

People use MultiLine as their work number for communicating with clients, partners and co-workers. When it comes to internal communications between co-workers, it's important to keep the conversation happening between work numbers rather than any personal numbers that may be added to the Contact list.

The *MultiLine Indicator* is an "M" icon  that appears near a contact name or number to identify it as a MultiLine number. This makes it easy to identify a co-worker's MultiLine number within MultiLine applications. The indicator appears for all MultiLine users in the company across all regions where the company operates.

## Availability

This new feature is available in all iOS and Android MultiLine mobile apps, MultiLine desktop apps, and MultiLine Messaging app for Teams.
