

Tablet and iPads

Last Modified on 10/17/2024 2:42 pm EDT

Topics on enabling MultiLine on iPads and tablets. iPads and Tablets run the MultiLine iOS and MultiLine Android mobile apps respectively. The administration and user experience is largely the same except that iPads and tablets typically use a Data-Only SIM, and so administrators will set up users with Data-Only permissions.

iPad

Read on for a brief overview of the MultiLine experience for iPad.

Introduction

The MultiLine application is a cloud-based communication solution that provides a secure and dedicated business number. This application can run on mobile phones or iPads. The experience for iPads is similar to the mobile phone with the same screens and elements that are resized to fit on the larger screen.

Features and Limitations

Platform Compatibility:

- iPads running OS 14 or newer

Responsive Design:

- Responsive user interface that adjusts seamlessly to any size screen
- Portrait mode only; landscape mode and multi-panel support is in development
- No support for external keyboards; support for external keyboards is in development

User Authentication and Authorization:

- Currently, MultiLine number can only deploy on tablet or mobile and not both.

Messaging Features:

- Real-time chat functionality with text, social message, and image sharing.
- Group chats
- Push notifications for new messages across the devices.

Calling Features:

- Supports calls over data or Wi-Fi

- For tablets with SIM, will support Minutes calling.

Offline Support for Tablets:

- Offline message caching and synchronization when the user comes online.
- Allows users to access recent messages and history without an internet connection.

Multimedia Handling:

- Supports sending and receiving images including jpegs and pngs

Security and privacy:

- End-to-end encryption for messages and calls to ensure user privacy.
- Compliance with data protection regulations and standards.

User Profile and Settings:

- Allow users to set profile pictures, update status, and manage account settings.
- Provide options for customization, such as themes and notification preferences.

Search and Filter:

- Implement a robust search functionality for finding contacts, messages, and call logs quickly.
- Filters for sorting conversations and contacts.

Feedback and Reporting:

- Includes a feedback mechanism for users to report issues or suggest improvements.

Enabling Users

Enabling tablet users is similar to enabling MultiLine user with mobile applications. Admins send out invitations with the information necessary to activate MultiLine, and users go through a quick process that associates their MultiLine number with the device. The primary distinction is that most tablet users will not have SIM connectivity, so during setup, the admin will need to set up the user for Data Only Onboarding.

User Experience

Activation

Calling

Users can see their call history on the Recents screen. Selecting the info icons will show more information about the call and possible user actions such as calling, messaging, and more.

Tablet

Read on for a brief overview of the MultiLine experience for Tablet.

Introduction

The MultiLine application is a cloud-based communication solution that provides a secure and dedicated business number. This application can run on mobile phones or tablets. The experience for tablets is similar to the mobile phone with the same screens and elements that are resized to fit on the larger screen.

Features and Limitations

Platform Compatibility:

- Android Tablets running OS 10 or newer

Responsive Design:

- Responsive user interface that adjusts seamlessly to 7" or larger screens.
- Portrait mode only; landscape mode and multi-panel support is in development
- No support for external keyboards; support for external keyboards is in development

User Authentication and Authorization:

- Currently, MultiLine number can only deploy on tablet or mobile and not both.
- If an existing mobile user wants to switch to use tablet, the following applies:
 - The user will need to receive a new invitation, where the admin has disabled Minutes mode and turned on Email OTP.
 - The user will lose any call logs or message history beyond the [call and messages back-up sync period](https://help.moviuscorp.com/help/call-and-messages-back-up) (<https://help.moviuscorp.com/help/call-and-messages-back-up>) .
 - Any locally stored contacts or settings will be lost.
- If an existing tablet user wants to switch to use mobile, the following applies:
 - The user will need to receive a new invitation, where the admin has enabled Minutes mode and, if desired, SMS OTP.
 - The user will lose any call logs or message history beyond the [call and messages back-up sync period](https://help.moviuscorp.com/help/call-and-messages-back-up) (<https://help.moviuscorp.com/help/call-and-messages-back-up>) .
 - Any locally stored contacts or settings will be lost.

Messaging Features:

- Real-time chat functionality with text, social message, and image sharing.
- Group chats
- Push notifications for new messages across the devices.

Calling Features:

- Supports calls over data or Wi-Fi

Offline Support for Tablets:

- Offline message caching and synchronization when the user comes online.
- Allows users to access recent messages and history without an internet connection.

Multimedia Handling:

- Supports sending and receiving images including jpegs and pngs

Security and privacy:

- End-to-end encryption for messages and calls to ensure user privacy.
- Compliance with data protection regulations and standards.

User Profile and Settings:

- Allow users to set profile pictures, update status, and manage account settings.
- Provide options for customization, such as themes and notification preferences.

Search and Filter:

- Implement a robust search functionality for finding contacts, messages, and call logs quickly.
- Filters for sorting conversations and contacts.
