

Version 4.08.01 | MultiLine and MultiLine for Intune-Android

Last Modified on 05/12/2025 1:34 pm EDT

MultiLine Android App v. 4.08.01 Release Notes

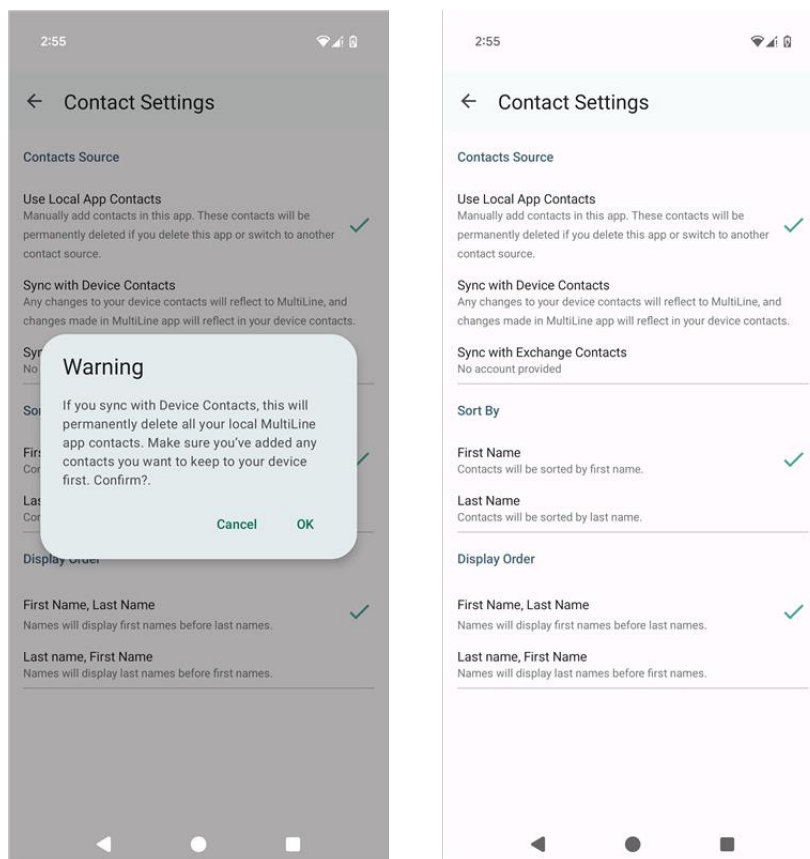

Target dates for release to app store:

- MultiLine for Intune | To Be Updated
- MultiLine | To Be Updated

What's new?

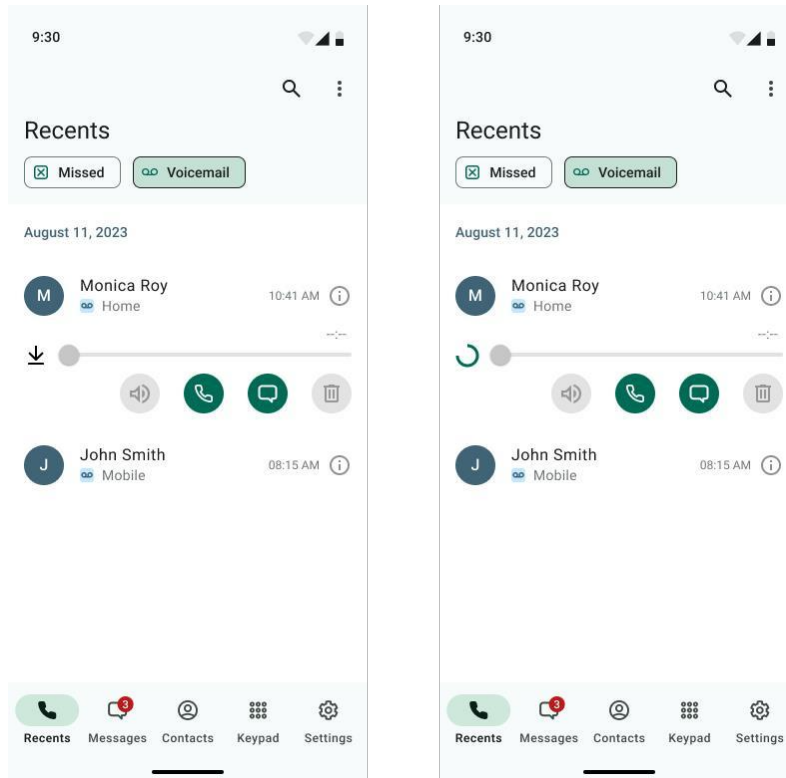

1. Contact Settings UI/UX improvements

- We've updated the contact source list text to enhance clarity and usability.
- Additionally, the descriptions and alert messages shown when changing contact sources have been revised to provide more explicit guidance and reduce confusion.

2. Voicemail Message Improvements

- We've enhanced voicemail functionality to ensure more reliable, real-time delivery of messages and clearer issue notifications.
- If a voicemail audio file isn't immediately available — such as in the case of a network connectivity issue — you'll now see an option to manually download the message, improving access and reducing uncertainty.

3. A new look for the MultiLine app logo!

- We're giving the MultiLine app a small visual refresh - our logo is changing!

- We're aligning with updated App Store guidelines while also taking the opportunity to give the MultiLine logo a new look.
- No other visual changes - just a fresh icon on your home screen and app.

Bug Fixes and Performance Improvements

- **Voicemail Delivery Fix:** Resolved an issue where voicemail messages were delayed—often due to network issues—causing users to miss notifications in certain cases.
- **Incoming Calls Not Appearing on Device Fix:** Fixed an issue affecting specific Samsung devices with Android 14. When these phones were in sleep mode for a few minutes, MultiLine would not ring for incoming calls, although the calls would still appear in the missed calls list.
- **General Enhancements:** Additional improvements have been made to overall app performance and reliability.
