

# Version 4.11.01 | MultiLine and MultiLine for Intune-Android Release Notes

Last Modified on 09/03/2025 12:00 pm EDT

## MultiLine Android App v. 4.11.01 Release Notes

### Target dates for the releases:

- MultiLine for Intune | September 10, 2025
- MultiLine | September 14, 2025

### What's new?

#### 1. Advanced Wi-Fi

- The MultiLine mobile app now detects when a device is connected to a Wi-Fi network with no internet access (commonly referred to as "zombie Wi-Fi") or when the Wi-Fi connection blocks app-critical ports or services. In such cases, the app will prompt the user for permission to bypass the faulty Wi-Fi and switch to cellular data, ensuring uninterrupted app functionality.

See [Advanced Wi-Fi for MultiLine](https://help.moviuscorp.com/help/introducing-advanced-wi-fi-for-multiline-app-september-2025) (<https://help.moviuscorp.com/help/introducing-advanced-wi-fi-for-multiline-app-september-2025>) [🔗](#) for more information.

#### 2. MultiLine App support for click-to-dial and click-to-text app URLs (deep linking)

- Users can now initiate calls or messages via the MultiLine mobile app directly from other apps using app-specific URLs. By simply tapping or clicking on a phone number, MultiLine will launch and handle the communication. This eliminates the need to manually copy numbers or switch between apps, streamlining workflows and improving the overall user experience.

### Bug Fixes

- Resolved an issue that, in rare cases, caused the MultiLine app to close unexpectedly on devices running Android 13 and 14 when switching networks.
